AsterVale AI Visibility — Executive Memo

Prepared by Kasparro · Month 1 (June 2026) Baseline & Month 2 (July 2026) Comparison

1. Executive Summary

AsterVale's final ASV Score moved from **31.45** (M1 reported baseline) to **43.91** on the matched cohort, a change of **+12.32pp** (+39.0% relative). The matched cohort covers **366 cells** (prompt × platform × replicate combinations eligible in both months). Non-Branded Discovery Score at M1: **10.85**; Branded Performance Score at M1: **62.34**. Movement in M2 is observed — not proven causal — and should be interpreted in the context of concurrent content fixes, platform model updates and the inherent variability of LLM responses.

2. Month 1 Baseline (Reported Period)

Metric	M1 Score	Cohort	Role
Category Presence	18.51	Non-branded	30% NB
AI Share of Voice	4.4	Non-branded	40% NB
Comparison Standing	9.04	Comparison NB	20% NB
NB Owned Citation Rate	17.31	AV-mentioned NB	10% NB
NB Discovery Score	10.85	Composite	60% Final
Branded Presence Quality	65.43	Branded	30% B
Branded Recommendation Rate	46.81	Branded	40% B
Branded Prominence	96.01	Branded	20% B
Branded Owned Citation Rate	47.87	AV-mentioned B	10% B
Branded Performance Score	62.34	Composite	40% Final
FINAL ASV SCORE	31.45	Composite	—

Scores are on a 0–100 scale. All values generated by the pipeline from M1 eligible runs.

3. Month 2 Matched-Core Movement

Metric	M1	M2	Δ (pp)	Rel. Δ
Category Presence	19.12	36.76	+17.65	+92.3%
Ai Share Of Voice	4.54	9.43	+4.88	+107.5%
Comparison Standing	9.04	24.47	+15.43	+170.6%
Nb Owned Citation Rate	17.31	34.00	+16.69	+96.4%
Nb Discovery Score	11.09	23.09	+12.00	+108.2%
Branded Presence Quality	65.43	84.15	+18.72	+28.6%
Branded Recommendation Rate	46.81	56.38	+9.57	+20.5%
Branded Prominence	96.01	98.40	+2.39	+2.5%
Branded Owned Citation Rate	47.87	76.60	+28.72	+60.0%
Branded Performance Score	62.34	75.14	+12.80	+20.5%
Final Asv Score	31.59	43.91	+12.32	+39.0%

Primary movement claim uses matched-core cohort only. Δ (pp) = percentage-point movement. Rel. Δ = relative change from M1. Temporal movement ≠ causal attribution.

4. Diagnosis — Prompt Family & Platform Drivers

Top-improving prompt families (matched M1→M2):

Prompt Family	ASV M1	ASV M2	ASV Δ
material_comparison	8.42	17.94	+9.52
brand_shortlist	6.03	13.88	+7.85
eco_friendly	4.97	11.71	+6.74

Platform breakdown (matched M1→M2):

Platform	ASV M1	ASV M2	ASV Δ
AnswerMind	30.79	38.92	+8.12
ChatAssist	29.66	47.87	+18.21
SearchAI	34.49	44.75	+10.26

5. Fix Assessment

Fix	Assessment	Confidence	Summary Evidence
F01: Entity and company-fact cleanu	consistent_with_improvement	medium	Positive signals observed: branded_presence_quality: +18.7234pp globally; branded_presence_quality in branded_overview: …
F02: Cooling Sheets Guide	consistent_with_improvement	medium	Positive signals observed: category_presence: +17.6471pp globally; category_presence in category_best: +17.3913pp; categ…
F03: Cooling-brand comparison page	consistent_with_improvement	medium	Positive signals observed: comparison_standing: +15.4255pp globally; comparison_standing in material_comparison: +17.391…
F04: Product claim and evidence ref	consistent_with_improvement	medium	Positive signals observed: branded_presence_quality: +18.7234pp globally; branded_presence_quality in branded_overview: …

F06: Independent expert-roundup out	not_evaluable_month_2	high	Fix was not live during the Month 2 audit window. No Month 2 signal can be attributed to this fix.
F07: Night-sweats FAQ expansion	not_evaluable_month_2	medium	Fix published near end of Month 2 audit window; insufficient exposure time for AI systems to index and incorporate. Mont…

Assessment = observational. Temporal sequence ≠ causation. One to two months is insufficient to isolate fix impact from platform variance.

6. Business Implication

AsterVale's AI visibility remains materially below 50 on most component metrics, indicating that LLM systems are either not aware of the brand in category contexts or are aware but attributing lower quality/prominence. The matched M1→M2 movement, where positive, is an encouraging early signal — but with only one comparison point and inherent LLM response variability, it cannot yet be treated as a trend. Branded prompts show stronger AsterVale presence than non-branded, suggesting the brand has awareness but insufficient category-level authority. Owned citation presence is the most direct lever AsterVale controls and should be the operational focus for Month 3.

7. Month 3 Priorities (Max 4)

Priority	Action	Target Metric	Measurement
1	Improve AI share of voice	ai_share_of_voice	Re-run M3 audit. Target: ai_share_of_voice increases by ≥5pp on matched M2→M3 co
2	Recover comparison standing	comparison_standing	M3 audit: track comparison_standing on matched M2→M3 cohort. Also check GSC non-
3	Increase AsterVale-owned citation presence	nb_owned_citation_rate	M3 audit: track nb_owned_citation_rate and branded_owned_citation_rate. Target:
4	Build third-party citation and brand trust signals	nb_thirdparty_citation_ra	M3 audit: track nb_thirdparty_citation_rate and branded_thirdparty_citation_rate

8. Methodological Caveats

Caveat 1 — Small matched cohort size: The matched cohort (cells eligible in both months) may be a subset of the planned design, limiting statistical power. Single percentage-point movements should not be over-interpreted.
Caveat 2 — LLM response variability: AI platforms do not produce deterministic responses. Two replicates per prompt reduce but do not eliminate noise. Observed movements may partially reflect platform model updates rather than content changes. A multi-month trend with larger replication would substantially strengthen confidence.
